**What investment philosophy does MI-PLAN follow?**

The fund follows a philosophy that alpha is generated from being able to assess the degree to which the *rate of change in earnings growth* differs from current consensus earnings estimates and is progressively discounted into each company's share price. To assess this, the manager uses seven key inputs, namely: industry, X Factor, Brand, 4P's (product, position, price, people), distribution, economic leverage and free cash flow impact on RoIC (return on invested capital). In reviewing each of these factors for each company, an understanding is arrived at that provides both a qualitative and quantitative assessment of how earnings growth rates may evolve. This approach, combined with some inference as to the market's assessment of earnings growth prospects, completes the picture. Portfolio construction and drawdown risk management play a key role in the ultimate portfolio composition. Asset allocation and stock selection vary according to the manager's macroeconomic view and the attractiveness of each asset class.
